How To Configure Bit Defender To Allow Trusted QSL. Courtesy of Walt Flesher, W6SA

From the Bit Defender screen, GO TO:

Shield Advanced Settings AVC should be enabled by default. If you turn it off you don't need to enter exclusions Exclusion Tab Click on + sign Add TQSL.EXE Add TQSLCERT.EXE Click OK and you should be able to open the TQSL programs without receiving an error message.

BitDefender Antivirus Pro 2011 Shield Virus Scan General Real-time protection is enabled Antivirus Last system scan: 9/1/2010 07:00:00 Scan Now Privacy Control Protection Level Vulnerability Aggressive AGGRESSIVE - Advanced security, moderate use of resources - Scans all files (includes network scan) Encryption Default - Scans incoming and outgoing e-mail messages - Scans for viruses and spyware Game/Laptop Mode - Scans web (HTTP) traffic Permissive - Actions for infected files: Disinfect infected files; Move file to quarantine Home Network - Scans with B-HAVE (heuristic analysis) - Scans IM traffic Update Registration Custom Level Default Level Advanced Settings Antiphishing and Search Advisor Search Advisor is enabled Whitelist Antiphishing is enabled for Internet Explorer. Antiphishing is enabled for Mozilla Firefox. Antiphishing is enabled for Yahoo! Messenger Antiphishing is enabled for Microsoft Windows Live Messenger. Click here to configure the BitDefender Active Virus Control settings. Active Virus Control provides advanced heuristic protection by monitoring running processes.
