

RADIO LAB HANDBOOK INTRODUCTION

About This Handbook

This handbook is the culmination of eighteen months of coordinating and cooperation between some forty elementary, middle and high school teachers and administrators who have made the personal and professional commitment to use Amateur Radio as an education resource in their schools.

The ARRL Amateur Radio Education & Technology Program started as a vision of ARRL President Jim Haynie, W5JBP and Vice President Kay Cragie, WT3P. That vision has developed into a nationwide system of public and private schools using Amateur Radio as an educational resource to enrich students learning.
